

The Next Generation of Quality Management Software

It is no longer acceptable for Quality Management Software (QMS) vendors to force your company into using their screens based on their ideas of how your processes should be done. Welcome to the next generation, where YOU control the software.

The next generation of QMS will be:

- Flexible and adaptable
- Based on your forms and your processes (or workflow)
- Integrated with your other software applications
- Compatible with email as the main user interface.

About the Presenter:

John M. Cachat, an internationally recognized subject matter expert on computerizing quality systems, will share his views and opinions on how the next generation of quality management software should look and behave.

After 20 years of designing, building, implementing, and maintaining commercial off the shelf (COTS) software, Mr. Cachat has created a new vision for supporting robust quality management systems in manufacturing, service, government, and other markets. For more information about Mr. Cachat, please visit his LinkedIn page at <http://www.linkedin.com/in/johncachat>.

Can't make this event but are looking for help? Join the LinkedIn Quality Management Software Forum to network with people on the subject of computerizing quality at <http://www.linkedin.com/groups?mostPopular=&gid=3224108>.
